Company History

Dan-iso A/S, founded in 1986, is today a Europe leading supplier of PUR & PIR pipe insulation. The company has strengthened its position in sectors such as district heating, construction, oil and gas, marine, and wind energy by continuously developing innovative solutions that meet the market's needs.

The company has undergone several key phases that have shaped its current market position. Owner and CEO Erik H. Møller took over the ownership of Dan-iso on January 1, 2018, and has since played a central role in the company's development. Together with his team, Erik H. Møller has continued and expanded the production of the well-known molded pipe insulation and broadened the company's product portfolio to include new market segments within industrial insulation solutions.

Erik H. Møller's vision and strategic leadership have been crucial in enabling Dan-iso to maintain and expand its competitive strength in a dynamic market. The company is a key player in the insulation industry and adapts effectively to new challenges and opportunities.

"We develop innovative insulation solutions in close collaboration with our customers and are constantly working to improve. Our goal is to be the preferred partner in the industry, delivering solutions that create value for our customers."

Business Areas

Dan-iso specializes in manufacturing high-quality insulation materials from polyurethane (PUR/PIR). We are a leading producer of PUR/PIR insulation shells in Europe, delivering several products for technical insulation needs.

→ **Direct distribution in DK**

→ **Primary export markets**

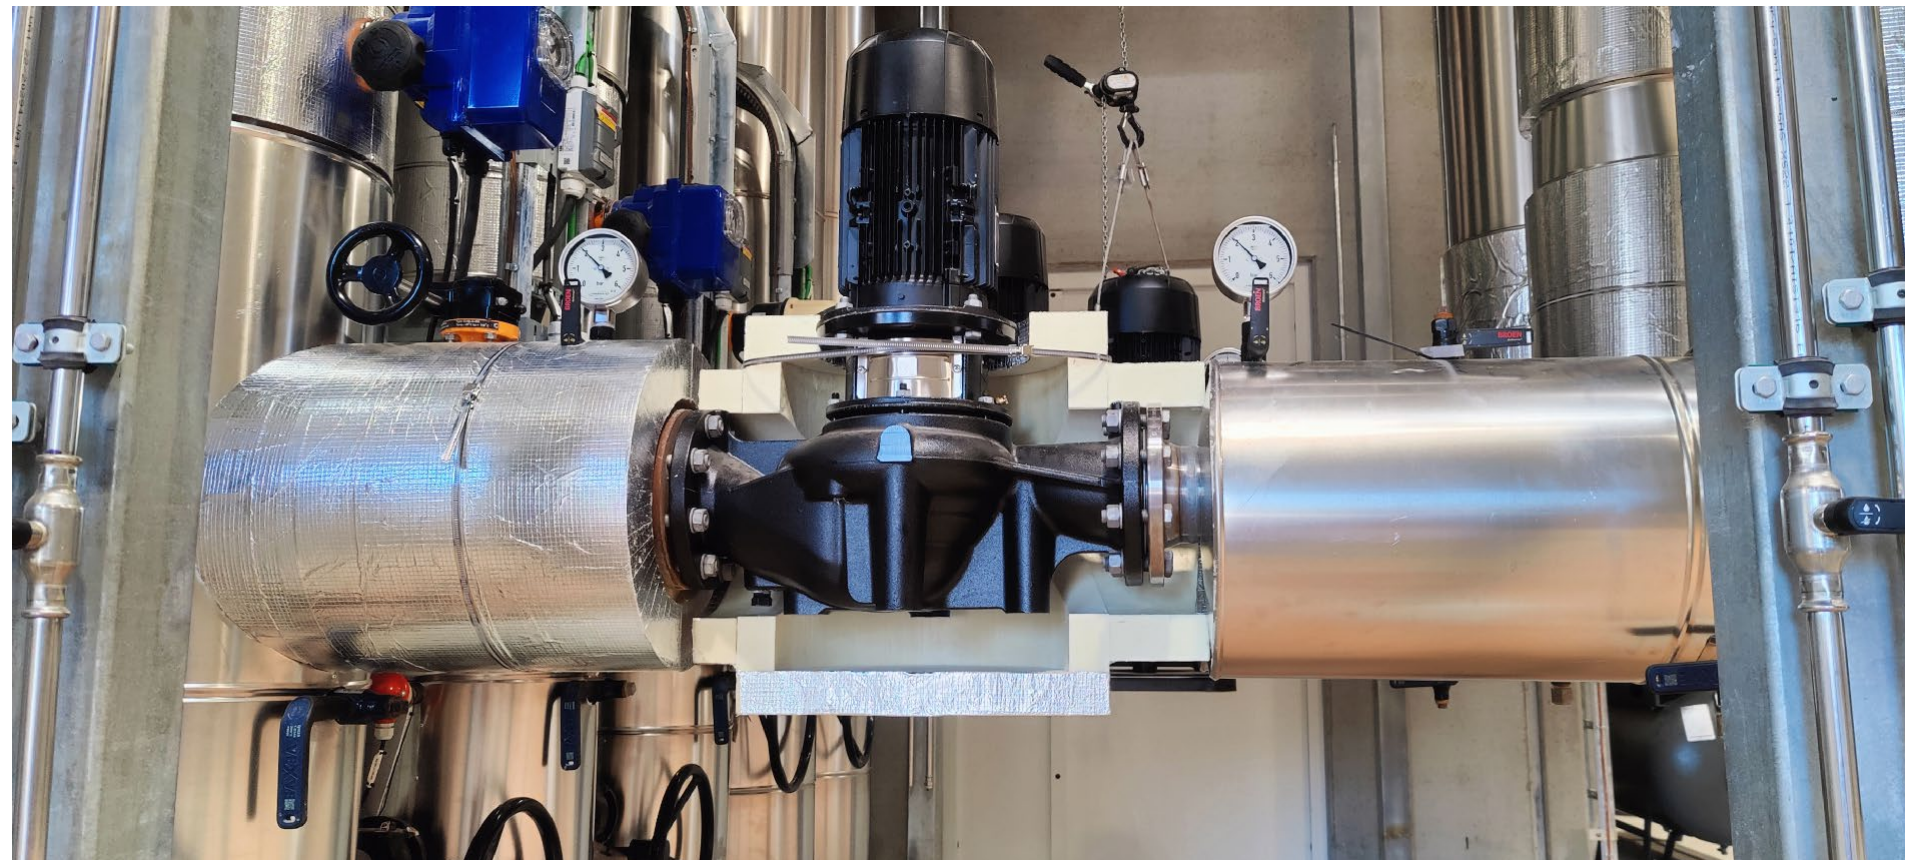

Market penetrations

Dan-iso serves international markets, focusing on Europe, with insulation solutions for industries like technical insulation, district heating, oil & offshore, cooling, wind energy, construction, and marine. Our focus on quality and collaboration makes us a trusted partner in reducing energy loss and enhancing efficiency.

Quality

Dan-iso is quality approved by all the major actors and supplies solutions to the European market for district heating. Our commitment ensures that we meet the highest industry standards, providing reliable and sustainable solutions that enhance energy efficiency. With a strong focus on customer satisfaction, we work closely with our partners to deliver tailored solutions that meet the unique needs of each project.

Aquatherm - in Germany
Brugg - in Denmark, Switzerland and Germany
Fintherm - Czech Republic
INPAL (Isoplus) - France
Isoplus - in Denmark, Germany and Benelux
Logstor - in Denmark, Poland, Sweden and Finland
Radpol - in Poland
Rehau - in Germany, the UK and the USA
SET Pipes - in Denmark and Island

And a large number of other players in the market ...

Competences

We produce insulation shells and bends made from PUR and PIR. Our services include special assignments such as CNC milling, prototypes, plugs, cutting, and gluing of block foam. We prioritize product development in close partnership with our customers, tailoring solutions to their specific needs.

- **To ensure** security of supply and flexibility, we maintain a buffer inventory.
- **Our PIR block foam** is classified as Euroclass E for fire safety (ISO 11925-2).
- **Our management strategy** focuses on collaborating with partners to develop new market solutions, such as “Haelok-shaped” half shells and flexible foams for PEX applications.
- **UVP-ISO-Shell** is a product range of high-insulation semi-shells with a protective exterior, designed for outdoor installation in harsh environments. These products are ideal for industrial plants where high-performance insulation is needed to minimize energy loss in both hot and cold systems, especially when part of the system is installed outdoors.
- **EC-ISO-Shell** features half shells with excellent insulation and a smooth exterior surface, making them easy to wipe down or clean with high-pressure systems. This range is perfect for the food processing industry and other applications requiring effective insulation to reduce energy loss in hot or cold systems. It ensures that the external surfaces of pipe installations remain clean to prevent bacterial growth and dirt accumulation.

Contact

Dan-iso administration and production facility is located in northern Denmark, conveniently close to the E45 highway. This position allows us to efficiently serve international markets, focusing on Europe.
